A CATHIE COMPANY

# G-Octopus: A Cathie Company

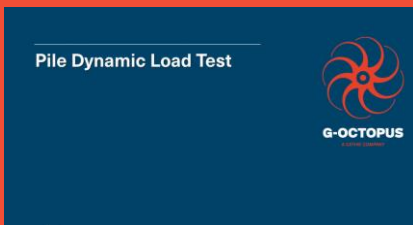

**G-Octopus are a Cathie company with over 15 years' experience in performing quality assessments and testing of deep foundations.**

We're experts in pile driving monitoring (PDM) and testing and we provide pile instrumentation solutions and advanced interpretation of PDM data onshore, nearshore, offshore and underwater.

We also supply quality equipment for foundation control and instrumentation.

We've supported projects on almost every content, in some of the most challenging environments. Our dedicated team provide round-the-clock assistance on all piling issues and on-site analysis of data, enabling a real-time preliminary assessment of the hammer/pile/soil system. Your time is our priority, so we ensure our equipment is thoroughly checked before the operation, and mobilised with 100 percent redundancy to make sure there is no project time lost.

For more information on G-Octopus, click on the links below or visit [our website](#) where you'll find information, [articles and case studies](#) about our services or watch our videos and listen to our [webinar](#) on [YouTube](#).
